FITTING INSTRUCTIONS

Before removing engine bolts, ensure the bike is upright and supported by a suitable engine stand or jack placed under the sump of the motorbike to support the partial weight of the engine, this will prevent the engine from moving during fitting. DO NOT REMOVE MORE THAN 1 ENGINE BOLT AT ANY TIME.

Assemble the crash protectors before removing the engine bolts to limit the amount of time the engine is partially un-supported.

- Remove the LHS engine bolt (**Picture 1**).
- Push the LHS bolt/assembly you prepared earlier into the engine mount hole and thread by hand to avoid cross threading. **NOTE: To avoid cross threading apply forward pressure to the bolt and rotate counter-clockwise until a click is heard then begin to turn clockwise & tighten.**
- Repeat the process for the RHS.
- Once completed, torque the bolts according to the general torque settings on page 2, then push the nut caps (**ITEM 6**) into place and remove the jack.

Please note: *Torque of the engine/bobbin bolts should be checked at regular intervals when doing routine maintenance/servicing.*

CONSUMER NOTICE

The catalogue description and any exhibition of samples are only broad indications of the Products and R&G may make design changes which do not diminish their performance or visual appeal and supplying them in such state shall conform to the order. The Buyer acknowledges no representation or warranty (other than as to title) has been given or will apply to the Products other than those in R&G's order or confirmation and the Buyer confirms it has chosen the Products as being of merchantable quality and suitable for its particular purposes. Where R&G fits the Products or undertakes other services it shall exercise reasonable skill and care and rectify any fault free of charge unless the workmanship has been disturbed. The Buyer is responsible for ensuring that the warranty on the motorcycle is not affected by the fitting of the Products. On return of any defective Products R&G shall at its option either supply a replacement or refund the purchase money but shall not be liable if the Products have been modified or used or maintained otherwise than in accordance with R&G's or manufacturer's instructions and good engineering practice or if the defect arises from accident or neglect. Other than identified above and subject to R&G not limiting its liability for causing death and personal injury, it shall not be liable for indirect or consequential loss and otherwise its liability shall be limited to the amounts paid by the Buyer for the Products or the fitting or service concerned. These terms do not affect the Buyer's statutory rights.

PHOTO DE MONTAGE

Photo 1

NOTICE DE MONTAGE

Avant de retirer les boulons du moteur, assurez-vous que la moto soit à la verticale et soutenue par un support moteur approprié ou un cric placé sous le carter de la moto pour supporter le poids partiel du moteur, cela empêchera le moteur de bouger pendant le montage. NE RETIREZ PAS PLUS D'UN BOULON DE MOTEUR À TOUT MOMENT.

Assemblez les protections crash avant de retirer les boulons du moteur pour limiter la durée pendant laquelle le moteur est partiellement sans support.

- Retirez le boulon moteur gauche (photo 1).
- Enfoncez le boulon/l'assemblage gauche que vous avez préparé précédemment dans le trou de montage du moteur et vissez-le à la main pour éviter de le fausser. REMARQUE : pour éviter de le fausser, appliquez une pression vers l'avant sur le boulon et faites-le tourner dans le sens inverse des aiguilles d'une montre jusqu'à ce qu'un clic se fasse entendre, puis commencez à tourner dans le sens des aiguilles d'une montre et serrez.
- Répétez le processus du côté droit.
- Une fois terminé, serrez les boulons conformément aux réglages de couple généraux de la page 2, puis poussez les capuchons de protection (ARTICLE 6) en place et retirez le cric.

Note : *Le couple de serrage des boulons du moteur/protection doit être vérifié à intervalles réguliers lors de l'entretien/réparation de routine.*
